Medicines 7	If the Community Mental Health Team looks after a Practice's patients on injectable neuroleptic medication, can the Practice claim under this Indicator?	Practices need to be part of the system for providing this service - they do not need to be giving the injections but they do have to have some responsibility for at least one patient during the year for making sure they get their jags. Thus, a practice where the local community mental health services takes full responsibility for call and recall, follow-up, prescribing and giving the injections would not be eligible. However, one where the local CMHT expected Practices to chase people up, give jags opportunistically when they defaulted etc would be eligible.	12.04.06
